

Solution Brief

Advantek's Business Solutions Mitigate and Remediate the top challenges being discussed in today's corporate boardrooms. The lack of data and network asset visibility are major contributing factors in Malware and Ransomware infiltration, as well as Data Privacy and Compliance risks.

On average, organizations have 20 to 30% more assets than previously known.

Does your organization have total visibility when it comes to its network assets and data? Not knowing creates potential malware and ransomware exposure along with unnecessary privacy & compliance risks.

The Solution: Advantek's Continuous Compliance Solution

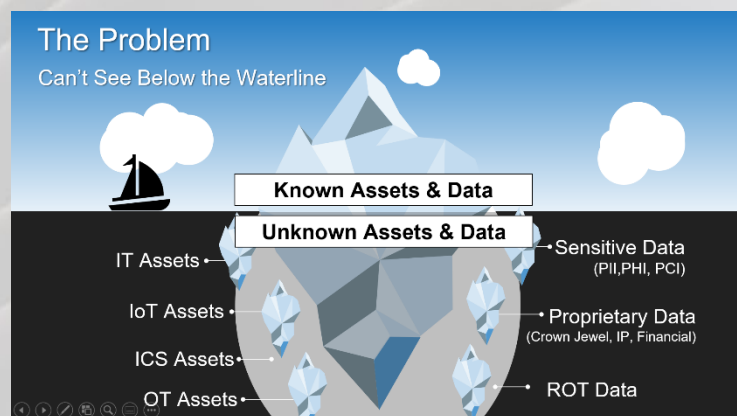

Provide continuous real-time monitoring to proactively identify, mitigate and remediate risks related to malware and ransomware to better protect your organization.

Identify sensitive, private, and critical data so that it can be better protected.

Designed to quickly provide an inside-out view of both data and IT landscapes (known and unknown network assets) through API-based integrations.

Easy to deploy and fast plug and play implementation providing actionable insights in minutes or days, not weeks or months.

Unknown assets create gaps in your security posture: you can't patch devices you don't know about, and you can't install agents on endpoints you're not aware. These exposures create additional attack surfaces that can be exploited.

The End Goal: Ongoing Risk Identification, Mitigation, and Remediation

Gain a holistic real-time and continuous view of assets and data provided. Reveal the true operational reality.

Better understand risks and make informed decisions quickly and comprehensively to move forward with risk mitigation efforts.

Automate the discovery, classification, actioning, and remediation of new or modified data on an ongoing basis.

As new privacy regulations emerge, create additional policies to build on top of existing models to remain compliant.

Gain real-time visibility into new and existing IT assets, security, and management products, giving insights into gaps and keeping our clients compliant.

“It is not what you know that gets you into the news. It is what you don't know.”
